

Britons for a Clean Atmosphere

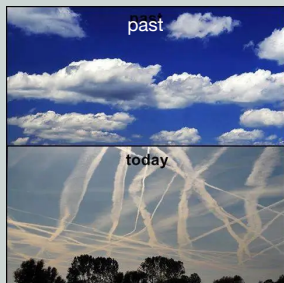

Be Part of the Solution

What types of pollution are Britons for a Clean Atmosphere focussed on tackling?

Radiofrequency/Microwave Radiation emissions from both ground and space-based infrastructure

Stratospheric Aerosol Injection - a form of Solar Radiation Modification, also known as Solar Geoengineering, involving the intentional release of hazardous emissions into our skies

We are a small group of volunteers working internationally, both to raise public awareness and to create legislative solutions to counteract the deliberate release of polluting emissions to our skies.
